seca 878 dr:

Robust scale with an appealing design.

The seca 878 dr is the perfect product for the demanding needs of your practice. Equipped with an LCD display that is readable from two directions and the comfortable foot switch makes this flat scale an ideal tool for any medical facility. It is light enough that it can be used in multiple exam rooms and robust enough that its performance capability can be enjoyed for years. It is a true seca quality product.

Precise results.

A modern medical device like the seca 878 dr cannot be compared with a conventional personal scale. The specially developed doctor scale is subject to the strictest requirements during its production process, has a user-friendly design, and delivers reliably precise data. A special extra feature is the more than impressive price-performance ratio.

Helpful functional diversity.

The LCD display that is readable from two different directions is the optimal solution for monitoring measured values. The buttons on the front for switching it on and off can be easily operated by foot. It is also possible to weigh infants stress-free using the mother/child-function. These features combined with a compact and modern design make the seca 878 dr ideal for today's medical practice.

Individually personalised.*

A good name is earned through quality and modern functionality. That is why the seca 878 dr has been labelled the "doctor scale". It indicates the value of the product while reflecting the professionalism of the user. The label gives users certainty about the precision of the measured values and can be personalised. Further information can be found at www.seca.com/doctorscale.

The flat construction and non-slip tread make it stable and comfortable to step onto.

The custom label serves to provide individual personalisation.

The two buttons on the front side of the scale can be easily operated by foot.
